

PROJECT NAME: SignAll

TEAM MEMBERS:

Blidaru David Ștefan, Cojocaru David Andrei,
Ene Andres Ioan, Oprea Vasile Sebastian

IDEA IN SHORT:

SignAll is a pioneering assistive tech platform that bridges the communication gap for the hearing-impaired. Powered by a custom DETR model, it transforms sign language learning into an interactive, real-time experience. Acting as a digital coach, **SignAll** provides instant validation, making inclusion accessible, engaging, and scalable through cutting-edge AI.

Hardcore Entrepreneur hackathon 6.0

1. PRODUCT - PROBLEM WE SOLVE

The Product & Core Innovation

SignAll is a real-time sign language detection system built on a custom-trained DETR model. Its core is a two-tier detection approach: a 0.45 confidence threshold keeps the hand tracked fluidly at all times, while a 0.90 threshold ensures a sign is only confirmed when the model is certain. Users get immediate visual feedback without false positives, the system feels both responsive and trustworthy.

Strategic Objective - RapidSign Access Point

Our B2B direction is the RapidSign Access Point: an autonomous kiosk for high-stakes environments where communication barriers have real consequences. Deployed at emergency room entrances, border crossings, and refugee reception centres, it acts as a 24/7 digital interpreter - delivering instant sign language recognition and multilingual translation with no wait for a human interpreter.

2. OUR TARGET GROUP & SDGs

Target Group:

- **Public & Institutional Sector:** Civil servants and medical staff requiring essential signing skills to assist all citizens equitably.
- **Academic Environment:** Students and teachers adopting inclusive communication through our "Learning Center" translations (English, currently).
- **B2B & Corporate:** Organizations aiming for high CSR (Corporate Social Responsibility) standards and diverse workplaces.

Sustainable Development Goals (SDGs):

- SDG 3 (Good Health & Well-being): Reducing social anxiety and isolation through better connection.
- SDG 4 (Quality Education): Modernizing learning through interactive AI-driven tools.
- SDG 9 (Industry, Innovation & Infrastructure): SignAll builds accessible digital infrastructure by bringing AI-powered sign language recognition to a smartphone.
- SDG 10 (Reduced Inequalities): Democratizing sign language to eliminate communication-based discrimination

3. SMART OBJECTIVES

The 5 elements

S (Specific): Launch the SignAll MVP featuring the DETR-powered Live Practice mode and a digital curriculum for an optional "Inclusive Communication" hour in 5 pilot schools.

M (Measurable): Success is defined by both technical and qualitative benchmarks: Achieving a 0.90 detection threshold, a 200ms capture-to-render cycle, and a 3-of-5 frame temporal smoother to prevent false positives.

A (Assignable): Specialized roles within Team SkyLine: Model Training, Cloud Architecture, and Mobile UX.

R (Realistic): Leveraging cloud-native scalability to handle concurrent sessions during the demo phase with secure API Key authentication.

T (Time-bound): Release the Beta version and integrate feedback from 3 partner NGOs within 3 months post-event.

4. PRICE

Monetization

SignAll Entry (Freemium): Free access to the "Learning Center" basics (fundamental signs) to ensure maximum social impact.

Specialized AI Packs (3 €/ module): Users can unlock domain-specific weights (e.g., Medical, Legal, or Hospitality packs) for the DETR model.

SignAll Pro (B2B/Institutional): Annual licenses for schools and government offices, including full library access, multi-language support, and advanced architecture stats.

5. PROMOTION

How and where we market

PROMOTION (Market & Outreach)

Social Media & FOMO Strategy: Our campaign, "The New Normal: SignAll," positions sign language as a "social superpower." We use influencers to trend the idea that inclusive communication is the new standard of modern intelligence.

Institutional Partnerships: Direct outreach to schools to implement our digital curriculum and to public offices to train staff via our "Live Practice" mode.

NGO Collaboration: Partnering with deaf associations to validate our model's accuracy and ensure the cultural relevance of the 6 signs included in our initial DETR training set.
